22.

(Amended) A method of displaying an image on a docking system in conjunction with a wireless telephone, comprising the steps of:

providing a docking station system having an active matrix liquid crystal display, a display control circuit and a connection port;

providing a wireless telephone handset having a transceiver capable of receiving audio and image data, and a connection port [adapted to mate] that mates with the connection port of the docking station, the wireless telephone having a speaker and a microphone;

electrically connecting [electrically and physically] the wireless telephone [having a speaker and a microphone in] with the docking station such that the display control circuit in the docking station receives image data from the transceiver, the wireless telephone being attached to the docking station at the connection port; and

operating the display control circuit connected to the transceiver and the matrix display to display an image on the display using the image data.

REMARKS

Applicant notes that the Wilska reference fails to disclose or suggest a display docking system that docks with a wireless telephone in which image data received by the telephone can be used to form images on the display in the docking system. This type of system is shown in Figures 9-11, of the present application for example. The claims have been amended to clarify this feature.

CONCLUSION

In view of the above amendments and remarks, it is believed that all claims are in condition for allowance, and it is respectfully requested that the application be passed to issue. If the Examiner feels that a telephone conference would expedite prosecution of this case, the Examiner is invited to call the undersigned at (781) 861-6240.

Respectfully submitted,

HAMILTON, BROOK, SMITH & REYNOLDS, P.C.
